

VIBRAPHONE

YV3030MS

Get on the vibe.

YV-3030MS VIBRAPHONE

The new YV-3030MS is an all-rounder instrument that has been designed to support not only advanced students but also experienced amateurs and pro players too offering them a great compact gig vibe.

Its professional specifications such as gas spring height adjustment, parallel damper action and drive unit with pause member function offer superb playability for a variety of musical situations.

Gas Spring Height Adjustment

The new gas spring height adjustment system gives the player the most direct and easy height adjustment ever possible on a mallet instrument. Pulling up the lever on the left and right leg raises the

height from the floor, while pressing down the top of the instrument while pulling up the lever lowers it toward the floor. When you release the lever, the instrument height is fixed at that height.

Minimum: 66 cm, Maximum: 85 cm
(Measured from floor to tone bar top)

Parallel Damper Action

The new parallel damper action offers smooth dampening options. Naturals and accidentals are dampened and released simultaneously.

Previous: Damper-arm damper motion

New: Parallel action damper motion

Vibration-dampening Rubber Joints Below Side Frame

Its flexible design allows the player to adjust each side of the instrument separately. The vibration dampener reduces the amount of floor noise when played.

Caution: Make sure that height adjustment does not result in a difference of greater than three markings on the left and right height scales. Please also ensure that the tone bars are levelled after the adjustment.

Flexible Disc Vibration Damper

Sound Bar Material

The YV-3030MS utilises the same high-quality aluminium alloy used for Yamaha's Celestas. The material produces a soft and warm tone that blends beautifully into ensembles.

Sound Bar Specifications

Range: F33 – F69 (f - f3)

Width: 39 mm, non-graduated, matte silver

Yamaha's Celesta CEL-56PGL

Damper Belt with Buckle

With the addition of the belt dampening link it's easier and safer than ever to adjust the instrument's height. It also gives players a smooth damper feeling allowing for damper effects.

The high-quality POM plastic buckles were tested 10,000 times without any reduction in grip or general functionality. High density polyester twill woven belt. Bent metal rods and worn-out screw threads are history.

Large stoppable casters

Enlarged casters improve manoeuvrability. The two casters at the player's position benefit from a brake function.

Drive Unit

The new Variable Speed Driver with a speed range of 30rpm – 145rpm is available separately.

It has a pause memory function ensuring that the fan shaft will always stop at the pre-set position when paused for non-vibrato playing. In addition, the pause memory function maintains a consistent volume even when the driver is started and stopped multiple times.

Additional technical information:

The YVD20 motor will initially rotate at maximum speed when the start button is pressed, regardless of the controller's speed setting. After approx. two seconds the motor will start rotating at the set speed. This starting sequence is a necessary calibration procedure for stable operation and not faulty.

Please note: Standard YV-3030MS is shipped without the drive unit and power adaptor. To order the complete set including the drive unit please reference YVSET-3030MS (Europe) and YVSET-3030MSUK (United Kingdom).
