

# **Previous HY144-D-SRC Firmware**

## **version information**

### **V4.2.1.1\_3.1.0**

Now supports the SMPTE mode\* of Dante Domain Manager (DDM) (ST2110 clocking).

The word clock and preferred leader cannot be changed during DDM enrollment.

\* In DDM SMPTE mode, the domain is configured for SMPTE ST2110 clocking, providing audio interoperability between Dante and non-Dante ST2110-30 devices.

### **V4.0.12.1\_2.0.8**

Fixed a problem in which sounds from Dante devices in a network might be temporarily interrupted during operation with HY144-D-SRC that was set to Redundant mode, Preferred Master ON, and Enable Sync to External ON if the primary port was disconnected and then connected again.

### **V4.0.11.1\_2.0.8**

Fixed a problem in which infrequently the card was activated when the device was turned on.

### **V4.0.10.2\_2.0.8**

Initial release
